All new footwear design nothing else like it around

Types of metatarsal fracture

"The metatarsal bones are some of the most commonly fractured (broken) bones in the foot. There are two main types of metatarsal fractures: Acute fractures - due to an acute (sudden) injury to the foot (commonly dropping a heavy object on to the foot, a fall, or a sporting injury). Stress fractures - due to overuse, or repetitive, injury to a normal metatarsal bone.
